

FlowTrack

Vivian Chen, Tavonga Tafuma, Ly Ha, Thuc Luong

What is FlowTrack?

- FlowTrack consolidates fragmented financial data from multiple tools and departments.
- Integrates key features: transaction tracking, cash flow management, business overviews, and spending forecasts.
- Allows businesses to monitor financial health in real time.
- Enables precise tracking of income and expenses.
- Empowers businesses to confidently project future financial goals.
- Streamlines financial planning for better control and insight.

Technical Architecture

- **Frontend:** React provides an interactive, responsive interface for transaction history and cash flow statements.
- **Backend:** Java handles core logic, data processing, and workflow management.
- **Database:** MySQL stores critical financial data, such as bank accounts, transactions, and forecasts.
- **API Integration:** Plaid API pulls real-time bank data for up-to-date financial insights.
- **Testing:** Postman ensures accurate REST API endpoint functionality and dependable data delivery.

How Plaid Works

Track Transactions

Allows businesses to track all financial transactions.

How It Works:

1. User logs in
2. User links a bank account using Plaid Link
3. App fetches transactions from Plaid
4. Users can filter & categorize transactions

What It Does:

- Real-time transaction tracking
- Provides categorized transaction views
- Gives clear snapshot of financial activity without manual entry

Key Benefits:

- Time saver
- Enhances financial visibility
- Lightweight and Efficient

Business Overview & Create Statements

- **How It Works**

- Categorizes and summarizes data into
 - Total Revenue & Expenses
 - Net Cash Flow
- Displays a summary of user's expenses

- **What it Does**

- Dynamic filtering of months and years to generate statement sheets
- Automatically groups revenue and expenses by category

- **Why It is Useful**

- Helps users understand their financial trends over time
- Visual representation of category breakdowns throughout all accounts

Forecast Spending

- **What It Does**

- Predicts your spending for the next 3 months
- Breaks it down by category: Food, Travel, Bills, etc.
- Shows results in a bar graph

- **How It Works**

- Pulls 6 months of past transactions via Plaid
- Calculates weighted averages—recent spending matters more
- Maps forecasts to 9 key categories with defaults for gaps

- **Why It is Useful**

- Simplifies budgeting with clear visuals
- Adapts to your spending habits over time
- Helps you plan ahead, no guesswork needed

Created by Alena Artemova
from Noun Project

An abstract geometric design on a black background. A large circle with a thin white outline and a thick light green inner border is centered. The word "Demonstration" is written in white sans-serif font inside this circle. To the left of the circle, two white zigzag lines extend from the edge. Below the circle, a small solid light orange circle is positioned. To the right of the circle, a light orange ring is located in the upper right, and a set of four parallel white diagonal lines is in the middle right. In the bottom right corner, a large solid light orange circle is partially visible.

Demonstration

Lessons Learned and Next Steps

- **Lessons Learned**

- API testing and integration into the application
- Robust project planning and system design
- Visualization drives user understanding
- Adequate resource allocation and task prioritization

- **Next Steps**

- Expand the number financial statement types that can be generated (Balance Sheets, Income Statements, etc.)
- AI Integration to help streamline budgeting and forecasting
- Incorporate more data visualization tools to improve user experience
- Add ways to track not only transactions but also liabilities, such as Loans
